Muhammad Ibrahim Asif 33754135: 5/5

Mohammed Bakkoush 33751418 :4/5

Danny Kadir: 33779044 :4/5

Charles Audain: 33705245: 5/5

Title and Project Details: GGWP, User Experience and the Web Module Code: IS51041A, **Akshi Kumar**

2. Website URL: <https://ibheehe.github.io/GGWP/>

3. Introduction: Our website is the ultimate game review website for every enthusiastic gamer, to show whether their favourite games are a “cop or flop”. Our website targets the community of gamers that love gaming. We help to provide all the necessary information needed to see if the game they are seeking is worth the buy or just a waste of time. We provide information on all aspects of the game, from the gameplay to any main bugs or exploits the community has found, we review it all.

4. Key Features: Our website has a contact support function if any user has any enquiries regarding anything, they can email us at the bottom of the page. Our website lists the top trending reviews of the games that have been released in that month to allow each user to see if they're money is going to be well spent on the games they desire. Over each game, we have implemented buttons to read each review. We believe our website is unique due to the fact it is simple yet efficient, there aren't many things going on at once to confuse or overwhelm the user.

5. Technologies Used: We used Visual studio code to work on our coding and wrote our code using HTML and CSS.

6. Lessons Learned: We learnt a lot regarding how to use HTML and CSS and how these programming languages can help us make a website for the user. It made us all fully understand how a user would think when interacting with different websites. As we compared different gaming websites to each other we understood what all of them had and didn't have to allow us to make our website more relatable and enjoyable for our users.

7. Future Enhancements: In the future we hope to make our website more advanced with other features such as a search bar, to allow the user to search for a game they want to read about instead of them just scrolling to find it on our main page. We also thought we would make the game reviews more diverse instead of it just being console supported, we would want it to include our fellow PC gamers also. We hope in the future we could add features that are reviewing not just games but also consoles/PC's that games are played on to help the user.
